

# THIS IS A BOLT-ACTION FIREARM

[WWW.KALIKEY.COM](http://WWW.KALIKEY.COM)

## KALI KEY BOLT-ACTION "GAS KEY"

## SEMI-AUTOMATIC GAS KEY

Firearms equipped with the Kali Key are bolt-action firearms. They cannot function as semi-automatic firearms.

The Kali Key's proprietary "gas key" (pictured above) is engineered to obstruct cycling gases from accessing the bolt carrier group's expansion chamber, thereby preventing the firearm from self-cycling. All cycling gases are diverted away from the rifle via the ejection port, making semi-automatic cycling impossible.

The images above contrast the Kali Key's specialized "gas key," which employs a curved wall to block and divert gases, and a standard mil-spec semi-automatic gas key. The semi-automatic gas key has a tubular opening that mates with the firearm's gas tube and guides cycling gases directly into the bolt carrier group's expansion chamber, thereby enabling semi-automatic cycling.
